

## Full Product Specification

### Tanita Body Composition Scales

Code BC543

The Innerscan range of body composition monitors is the next generation in home healthcare, an exclusive concept developed by Tanita. They offer an in depth insight into the inner health of the user, clearly displaying changes on overall health and fitness levels. Using Advanced Dual Frequency Technology, in depth information can be provided about muscle mass, central fat level, metabolic rate and physique rating.

### Product Information

The BC-543 is a new addition to the Innerscan range. The new feature: 'Adult's & Children's healthy body fat ranges' makes this monitor ideally suited to individuals who want to monitor the health of their whole family.

The technology used in consumer based body composition monitors is based on the same advanced technology found in the professional body composition analysers. The professional range is widely used by doctors, medical centres and by professional athletic teams, fitness clubs and personal trainers around the world.

The BC-543 clearly displays changes in overall health and fitness levels. Using Advanced Dual Frequency Technology, in depth information can be provided about muscle mass, central fat level, metabolic rate and physique rating. Tanita's research has shown that using two different electrical frequencies (2 x Mhz) gives a more accurate picture of human cellular structure. This method enables the user to obtain more in depth information regarding their body composition such as muscle mass, visceral (abdominal) fat level, metabolic rate and physique rating.

### Product Features & Specifications

- Patented invisible footplates
- Adult's and children's healthy body fat ranges
- Total body water %
- Body fat %
- Visceral fat rating
- Visceral fat healthy range
- Bone mineral mass
- Basal Metabolic Rate
- Metabolic age
- Muscle mass
- 9 physique ratings
- Weight only function
- Athlete mode
- Weight, body fat %, body water %, and all body composition features recall
- Weight capacity 150kg / 23st 8lb
- Guest mode
- 4 push button setup memories
- Weight increment 100g / 0.2lb
- Toughened safety glass and LCD size 32mm
- Batteries included
- 3 year guarantee
