

Full Product Specification

MicroPeak Peak Flow Meter

Code MPFM

25 years experience of design, testing and improving the world's leading Peak Flow Meters (PFM) has led to the new generation MicroPeak. Accuracy is unaffected by temperature, humidity and air pressure. The level of accuracy has been certified by the extremely rigorous ATS standards.

Product Information

MicroPeak Peak Flow Meter will assist an individual to monitor lungs under functionality of the respiratory tract by measuring Peak Expiratory Flow Rate (PEF). It should be used in conjunction with Physician or other qualified Health Professional, who can explain what the zones mean and what to do if PEF changes.

Designed to meet new standards in performance and quality including a high visibility scale and built-in Colour-Zone asthma management system that won't wash off. Unlike other PFM's the advanced design of MicroPeak means dismantling is avoided, thus protecting the integrity of the internal mechanism, also an internal check valve avoids cross infection concerns
MicroPeak comes complete with instructions and a 4-week recording chart.

Product Features & Specifications

- MicroPeak Peak Flow Meter
- Peak Expiratory Flow (PEF)
- Expiratory readings
- Standard range 60 – 900 L/MIN
- ATS scale
- Sterilisable mouthpiece (1)
- Pack of zoning strips (1)
- Instructions for use and peak flow chart
- Optional: disposable cardboard tube mouthpieces
